ObjectARX was discontinued from Autodesk in March 2010, and is no longer supported. Fully integrated Visual LISP macros can be used within AutoCAD. These macros can be written in Visual LISP, a programming language that runs on top of the AutoLISP runtime. Visual LISP is the precursor to VBA, AutoCAD's native scripting language. Visual LISP programmers cannot share their macros with other AutoCAD users, so for this reason most macro programmers use an external editor and compile their macros rather than writing them directly in AutoCAD. In the past, the limitation of using Visual LISP in AutoCAD meant that it was not possible to create macros that

could be used in batch, for example, in a construction company. Visual LISP (VLD) allows the embedding of its own objects, which in turn can be embedded in a user-defined class or document in AutoCAD. For example, a unique part can be saved in a class which can then be used in all drawings, and then in the same drawing a part can be attached to this class. Since they can be seen from the drawing, they can be inserted in the drawing as well, and the class does not have to be used in all drawings. AutoLISP AutoLISP is an object-oriented language built on top of the AutoLISP language. It was released in the late 1990s to facilitate the development of custom AutoCAD plugins that are more object-oriented. In Autodesk AutoCAD LT 2008, AutoLISP was added as a predefined language on the Tools menu. AutoLISP can be used to automate as well as customize AutoCAD. The user can create, edit, and compile macros in AutoLISP as opposed to the Visual LISP language, which is considered to be more cumbersome and harder to work with. While most users of AutoLISP are programmers, a large number of end users use AutoLISP to customize and automate various aspects of AutoCAD. AutoLISP takes the form of a series of functions, each of which has a corresponding editor window on the right side of the program. The functions can be organized into blocks, which define the overall structure of the program. The flow of execution within the program is controlled by the "if" statements within each block.
